

From the Desk of Miss Sutherland

Grade 5

May 15th – May 21st, 2019

We are reinforcing our geometry skills. Students are expert at identifying types of triangles using the words acute, obtuse, right, scalene, isosceles and equilateral. They also know how to find the 3rd angle measure of a triangle mathematically. This week we are working on the attributes of quadrilaterals. Study guides were distributed today for our chapter test on geometry which will be next Wednesday.

Our last unit will be a review of multiplying and dividing fractions and mixed numbers. These skills are essential as your

children move into 6th grade next year. I want them to be confident and accurate!!

On Friday we will be completing a CSI activity in which students complete a series of math problems in order to find the culprit of a crime. Fun!

And....there's still room for a little humor....

"We found the least common denominators in math, ran a half mile in gym, and learned about eighth notes in music. If there are any fractions in today's English lesson I'm going to scream!"
